### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Neil Feltham on November 20, 2006.

The application has been amended as follows:

In the specification, page 12, lines 11-12, "; see also [www.ncbi.nlm.nih.gov/BLAST/](http://www.ncbi.nlm.nih.gov/BLAST/)" was deleted.

In the specification, page 42, lines 24-25, "; see also [www.ncbi.nlm.nih.gov/BLAST/](http://www.ncbi.nlm.nih.gov/BLAST/)" was deleted.

In the specification, page 44, lines 9-10, "; see also [www.ncbi.nlm.nih.gov/BLAST/](http://www.ncbi.nlm.nih.gov/BLAST/)" was deleted.

In the claims:

In claim 1, line 8, –fully— was inserted before "complementary".

In claim 6, line 5, "enzyme" was substituted with –polypeptide—.

In claim 8, line 1, "chimeric gene" was substituted with –recombinant DNA construct—.

In claim 11, line 1, "A" was substituted with –The—.

Claims 16-25 have been canceled.

The above amendments were made to delete hyperlinks, obviate potential issues under 35 U.S.C. 112, second paragraph, and cancel nonelected inventions.

### **REASONS FOR ALLOWANCE**

2. The following is an examiner's statement of reasons for allowance: the broadest claims are drawn to an isolated polynucleotide encoding a polypeptide having cis-prenyltransferase activity, wherein the encoded enzyme has an amino acid sequence of at least 90% sequence identity to SEQ ID NO:4. Since SEQ ID NO:3 and 4 were first disclosed in 60/425902, Applicant shall have priority benefit of the filing date of November 13, 2002. SEQ ID NO:4 has 301 amino acids. SEQ ID NO:3 was isolated from *Taraxacum kok-saghyz*. The closest prior art teaches a sequence from *Arabidopsis thaliana* having 48.4% sequence identity with SEQ ID NO:4, (Lin et al., Nature 402, pp. 761-768, 1999 (U)). The prior art does not teach or suggest a sequence having 90% sequence identity with SEQ ID NO:4. It is understood that Applicant's percent identity was calculated using the Clustal method of alignment and default parameters set forth on page 13, lines 26-28 of the specification. Cis-prenyltransferase is an enzyme involved in the production of rubber in rubber plants (p. 1). SEQ ID NO:3 contains a complete open reading frame encoding the complete protein of SEQ ID NO:4. Accordingly, the claimed invention is novel, has utility and complies with written description and enablement requirements under 35 USC 112, first paragraph.

Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
